

Four Claude Code Plugins

Not a list of fifty. Four plugins that change how Claude Code actually behaves: less token burn, memory between sessions, and a review pass that catches what you would have shipped. Every number below checked on GitHub and Anthropic's own pages, July 2026.

01

PonytailWrites less code

89,705 stars, MIT. Its own README benchmark reads “~**54% less code (up to 94%)** · ~**20% cheaper** · ~**27% faster** · **100% safe**”, measured across 12 feature tasks on a real repo. Note the honest version: it is ~54% less *code* and ~20% cheaper, not 50% off your bill.

```
/plugin marketplace add DietrichGebert/ponytail
```

```
/plugin install ponytail@ponytail
```

02

claude-memMemory between sessions

88,619 stars, Apache-2.0, shipped 3 days ago. Captures what the agent did, compresses it, and injects the relevant part into your next session, so you stop re-explaining your own project every morning.

```
npm install claude-mem
```

03

Code ReviewAnthropic's own

“AI code review with specialized agents and confidence-based filtering for pull requests.” It launches **five agents in parallel** — CLAUDE.md compliance, bug detection, git history, prior PR comments, code comments — and only posts findings above a **confidence of 80/100**. 430,450 installs. /code-review on any PR branch.

04

The official marketplaceWhere they come from

anthropics/claude-plugins-official (32,692 stars) is Anthropic's curated directory — Code Review lives inside it. Add it once and every plugin is one command away.

```
/plugin marketplace add anthropics/claude-plugins-official
```

```
/plugin install <name>@claude-plugins-official
```

The order that actually helps

Copy

1. claude-mem first — it pays off from session two onward.
2. Ponytail next — less code written is less code to maintain.
3. Code Review last — run it before you ship, not while you build.

install one, use it a week, then add the next. All four at once and you

will not know which one changed the behaviour.
