

FREE AI VIDEO: LINGBOT

China's newest open-source video model. Tops the open-source leaderboard, runs on your own machine, unlimited generations, \$0.

01 GRAB THE WEIGHTS FREE

Two sizes on Hugging Face: **Dense 1.3B** (runs on a normal PC) and **MoE 30B-A3B** — 30B params, only 3B active, ~3x faster.

02 PICK YOUR RUNNER EASIEST

ComfyUI community nodes, a **Docker** image that auto-downloads weights, or straight from the repo with the commands below.

03 PROMPT IT RIGHT PRO TIP

Use the bundled **Prompt Rewriter**: plain English in, structured prompt out. T2V, I2V and T2I all work. **Apache 2.0** — commercial use is fine.

COPY • PASTE • RUN

```
$ git clone github.com/Robbyant/lingbot-video
$ pip install -r requirements.txt
# weights: huggingface.co → LingBot-Video
```

TIP 01

Start with Dense 1.3B — light, impressive, perfect for testing prompts.

TIP 02

Terminal-shy? The ComfyUI route is the same model with no code.

TIP 03

Apache 2.0 license — use your videos commercially, no strings.
